BEST ANTS UK | ANT CARE SHEET

Keeping ants since 1997

Intermediate

Pheidole morrisii

Morris's big-headed ant

A fast-growing, golden-yellow big-headed ant from the sandy pine barrens and grasslands of the eastern USA. A North American ant, not sold by Best Ants UK and possibly illegal or impossible to import to the UK.

ORIGIN

Eastern USA

New York to Florida and Texas; sandy soil

NEST TEMPERATURE

24–28°C

Best about 26°C; heater at 26°C

OUTWORLD TEMPERATURE

18°C night, up to 28°C day

By day like the nest or a degree or two cooler

HUMIDITY

Nest 50–70%

Outworld about 50%, never watered

WINTER

Natural rest (northern colonies)

10–15°C only in a hibernation unit, or room temperature

MOVE TO A NEST

50+ workers

A queen on her own too (tiny workers)

SIZE

Queen 8–10 mm

Minors 3–3.5 mm, majors 4–5 mm, yellow

COLONY

Usually one queen

5,000–10,000 ants when mature

Food

- **Proteins:** Protein Jelly (keep in the fridge) or Cricket Mash. Live food only for established colonies: scalded, cut in half, never smaller, no mealworms
- **Carbohydrates:** organic Ant Honey or Ant Nectar, far better than sugar water or home-made mixes; small drops
- **Seeds:** optional; keepers report captive colonies rarely take them. On tin foil only, never on the substrate

- Twice a week, small amounts, outworld only; leftovers out after 2 days. Founding queen: a tiny drop of protein jelly on tin foil once a week

Water

- Distilled or purified water only. Never tap, rain or bottled mineral water, even boiled (mould and fungus).
- Pipette a few drops through the watering hole; stop when 1–2 drops appear inside. About once a week, or when the meter drops below 50%.
- Never water the outworld; keep it at about 50% humidity. A watering test tube in the outworld gives a safe drink.

Best setup

- A7 Plus ant farm kit only (small nest, built-in digital meter); Nest + Outworld option if you already have your ants
- Advanced Heating System Small 4W under one quarter of the nest, opposite the watering area, set to 26°C
- Daylight, never direct sunlight; away from windows, radiators, vibrations, speakers and kitchens
- Escape risk: high, tiny fast workers. PTFE Fluon band on the top inner edge of the outworld lid, reapplied every 2–4 weeks

Good to know

- North American ant: not sold by Best Ants UK, and possibly illegal or impossible to import to the UK. We never encourage importing ants
- Protein drives its fast growth; keep the outworld clean, as old scraps bring mould and mites. No rest in a queen's first year
- Never release it. Can't keep it? See our ant adoption page
